1 General information

1.1 PRODUCT

MW 35 - Rd=3,5

1.2 VALIDITY

Issue date: 25-04-2024

Valid until: 25-04-2029

1.3 OWNER OF THE DECLARATION

Manufacturer: Knauf Insulation B.V. (2023)

Address: Dakota 7, 5126 RL Gilze

E-mail: customerservice.nl@knaufinsulation.com

Website: <https://www.knaufinsulation.nl/>

Production location: Knauf Insulation (Visé)

Address production location: Rue de Maestricht 95, B-4600 Visé

1.4 VERIFICATION OF THE DECLARATION

The independent verification is in accordance with the ISO 14025:2011. The LCA is in compliance with ISO 14040:2006 and ISO 14044:2006. The EN 15804:2012+A2:2019 serves as the core PCR.

Internal External

Agnes Schuurmans, SGS Search / Intron

1.5 PRODUCT CATEGORY RULES

NMD Determination method Environmental performance Construction works v1.1 March 2022 and PCR EN 16783

1.6 FUNCTIONAL UNIT

m2

1 m2 of glass mineral wool (GMW), for which a biobased binder ECOSE® is used in the production process. The GMW can be applied with or without an additional facing (depending on environmental and/or technical requirements or conditions).

The final product is manufactured at the production facility Visé (BE) and has a minimum reference service life of 75 years (SBR guide for service lifes).

Reference unit: square meter (m2)

1.7 CONVERSION FACTORS

| Description | Value | Unit |
|---------------------------|----------|------|
| Reference unit | 1 | m2 |
| Weight per reference unit | 2.340 | kg |
| Conversion factor to 1 kg | 0.427350 | m2 |

1.8 SCOPE OF DECLARATION AND SYSTEM BOUNDARIES

This is a Cradle to gate with options LCA. The life cycle stages included are as shown below: (X = module included, ND = module not declared)

| A1 | A2 | A3 | A4 | A5 | B1 | B2 | B3 | B4 | B5 | B6 | B7 | C1 | C2 | C3 | C4 | D |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|---|
| X | X | X | X | X | X | X | X | ND | ND | ND | ND | X | X | X | X | X |

The modules of the EN15804 contain the following:

1 General information

| | |
|--|---|
| Module A1 = Raw material supply | Module B5 = Refurbishment |
| Module A2 = Transport | Module B6 = Operational energy use |
| Module A3 = Manufacturing | Module B7 = Operational water use |
| Module A4 = Transport | Module C1 = De-construction / Demolition |
| Module A5 = Construction - Installation process | Module C2 = Transport |
| Module B1 = Use | Module C3 = Waste Processing |
| Module B2 = Maintenance | Module C4 = Disposal |
| Module B3 = Repair | Module D = Benefits and loads beyond the product system boundaries |

Module B4 = Replacement

1.9 COMPARABILITY

In principle, a comparison or assessment of the environmental impacts of different products is only possible if they have been prepared in accordance with EN 15804+A2. For the evaluation of the comparability, the following aspects have to be considered in particular: PCR used, functional or declared unit, geographical reference, the definition of the system boundary, declared modules, data selection (primary or secondary data, background database, data quality), scenarios used for use and disposal phases, and the life cycle inventory (data collection, calculation methods, allocations, validity period). PCRs and general program instructions of different EPD program operators may differ. Comparability needs to be evaluated. For further guidance, see EN 15804+A2 (5.3 Comparability of EPD for construction products) and ISO 14025 (6.7.2 Requirements for comparability).

2 Product

2.1 PRODUCT DESCRIPTION

Knauf Insulation GMW is a lightweight thermal insulation material of which the binder is made of biobased raw materials (ECOSE®). The product partially consists of recycled materials (external and internal).

The dimensions, density and mass of the product may vary accordingly to the technical specifications of the final product.

2.2 APPLICATION (INTENDED USE OF THE PRODUCT)

Knauf Insulation GMW products are used for any insulation purpose in the construction industry. GMW - with or without a facing. Because of the technical specifications, these products are used in high quality level constructions where energy efficiency performance has an essential role, as well as fire and/or sound insulation.

For example, Knauf Insulation GMW can be used in external wall applications such as cavity walls, ventilated façades, metal frame and timber frame constructions.

The specifications (e.g. format, density, thickness, binder content and facing) of Knauf Insulation GMW products depend on the actual environmental conditions and desired technical requirements.

Knauf Insulation GMW products can be used for (but not limited to):

- Pitched roof constructions (warm or cold variant)
- External walls with insulation from inside (available as system)
- Partition walls (importance of the acoustical performance)
- Timber or metal framed constructions (sandwich panels)

2.3 DESCRIPTION PRODUCTION PROCESS

The production process consists of the following stages.

- Mixture of raw materials
- Production of glass
- Production of ECOSE® binder
- Fiberizing and forming GMW
- Curing and cooling GMW
- Application of optional facing

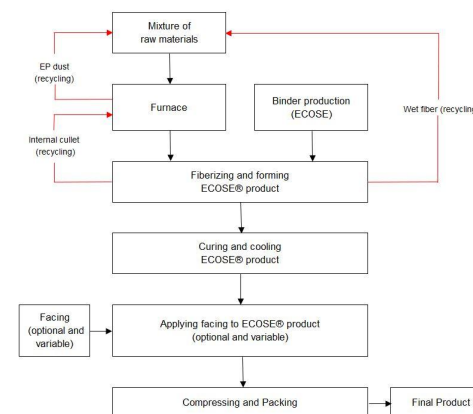

At Knauf Insulation, the main raw material for manufacturing GMW is recycled glass, also called external cullet. For the plant Visé, this is an average of 80% of the total batch.

Furthermore recycled wet fibres are recycled within the own production process (no waste).

Other raw materials used are sand, limestone, dolomite, feldspathoid nepheline and manganese dioxide, borax and sodium carbonate.

All materials are first weighed and mixed. The mixture is sent to a furnace at a very high temperature. The molten glass is fiberised and the binder ECOSE® is applied to the fibers (except for white woolen products). The fibers are collected on a metal conveyor belt (forming process). The recycled cutting residues are also blown in at this location. The thickness of the final product is also regulated at this point. The GMW mattress then goes through the drying oven to cure the binder.

After cooling, the mattress is cut to the correct width and length, then optionally covered with a facing (depending on the technical requirements of the final product), compressed and packed.

Information about Glass Mineral Wool production

The Glass Mineral Wool products for (GMW) are available in the form of slabs, rolls and boards.

In general the density for Glass Mineral Wool ranges from 10 to 85 kg/m³ and Glass Mineral Wool consists of at least 92% inert material. The inert part is made of recycled glass (external cullet, up to 80% of the composition) and mainly sand and dolomite.

The remaining fraction (less than or equal to 8%) is made of bio-based binder components. At Knauf Insulation, the binder used for GMW products is the ECOSE® Technology binder whose origin is plant starch.

2.4 CONSTRUCTION DESCRIPTION

The installation process of a Knauf Insulation GMW product depends on the actual application. In general, all products are fixed to the construction or fitted between a framework. This requires minimal (if any) additional energy or auxiliary materials and therefore the impact is assumed to be negligible (and not declared).

Disclaimer 1 – This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Disclaimer 2 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

3.3 INFORMATION ON BIOGENIC CARBON CONTENT PER SQUARE METER

BIOGENIC CARBON CONTENT

The following Information describes the biogenic carbon content in (the main parts of) the product at the factory gate per square meter:

| Biogenic carbon content | Amount | Unit |
|---|---------|------|
| Biogenic carbon content in the product | 0.03653 | kg C |
| Biogenic carbon content in accompanying packaging | 0.04682 | kg C |

UPTAKE OF BIOGENIC CARBON DIOXIDE

The following amount carbon dioxide uptake is taken into account. Related uptake and release of carbon dioxide in downstream processes are not taken into account in this number although they do appear in the presented results.

| Uptake Biogenic Carbon dioxide | Amount | Unit |
|--------------------------------|--------|-------------------|
| product | 0.1339 | kg CO2 (biogenic) |
| Packaging | 0.1717 | kg CO2 (biogenic) |

3.4 ENVIRONMENTAL COST INDICATOR NL PER SQUARE METER

Using the environmental cost indicator (ECI) method, which is presented in the NMD Determination Method (2020), the results are aggregated to the single-point score. The ECI is a relevant valuation method, especially in the Dutch construction sector. In the Netherlands, it is a prerequisite for public tenders. The aim of the indicator is to show the shadow price for environmental impacts of a product or project. The application of single-point scores is an additional assessment tool for eco-balance results. However, it must be pointed out that weightings are always based on a value maintenance and not on a scientific basis (EN 14040). The ECI results are shown in the following table.

| Module EN15804 | ECI NL | Share in total (%) |
|---|---------------|--------------------|
| A1 Raw Materials Supply | € 0.04 | 13,2 % |
| A2 Transport | € 0.01 | 2,8 % |
| A3 Manufacturing | € 0.22 | 66,5 % |
| A4 Transport from the gate to the site | € 0.01 | 2,9 % |
| A5 Construction - Installation process | € 0.02 | 4,8 % |
| B1 Use | € 0.00 | 0,0 % |
| B2 Maintenance | € 0.00 | 0,0 % |
| B3 Repair | € 0.00 | 0,0 % |
| C1 De-construction / demolition | € 0.00 | 0,0 % |
| C2 Transport | € 0.00 | 1,2 % |
| C3 Waste processing | € 0.00 | 0,1 % |
| C4 Disposal | € 0.00 | 0,5 % |
| D Benefits and loads beyond the product system boundary | € 0.03 | 8,0 % |
| ECI NL per functional unit | € 0.34 | |
